

1. (Twice Amended) Method for searching a database to obtain an object that is related to an indicated object in a document, comprising:

- (a) automatically creating a query directly from the indicated object, the query having a data structure that is recognizable by a search engine for the database;
- (b) providing the query to the search engine, the search engine searching the database for at least one object that is related to the indicated object;
- (c) returning the result from the query of the database, the result indicating when at least one object is related to the indicated object; and
- (d) producing a display of a related object, so that the related object may be associated with the indicated object.

5. (Amended) Method for obtaining an image from a database for insertion into a document, the image being related to indicated text, comprising:

- (a) enabling an automatic creation of a query directly from the indicated text, the query having a data structure that is recognizable by a search engine for the database;
- (b) providing the query to the search engine, the search engine searching the database for an image that is related to the indicated text;
- (c) returning the result from the query of the database, the result indicating when at least one image is related to the indicated text;
- (d) enabling the display of at least one image indicated by the result from the query, a displayed image being selectable for insertion into the document; and
- (d) displaying a related image that is inserted into the document, so that the related image is associated with the indicated text in the document.

48. (Amended) A system for obtaining an image from a database for pasting into a document, the image being related to indicated text, comprising:

- (a) a client process for causing functions to be performed, including:

(i) enabling an automatic creation of a query directly from the indicated text, the query having a data structure that is recognizable by a search engine for the database;

(ii) providing the query to the search engine, the search engine searching the database for an image that is related to the indicated text;

(iii) enabling a display of at least one related image indicated by the result from the query, the display of a related image being selectable for insertion into the document; and

(iv) displaying the related image that is inserted into the document, the related image being associated with the indicated text in the document; and

(b) a server process for causing functions to be performed, including:

(i) returning the result from the query of the database, the result indicating when at least one image is related to the indicated text; and

(ii) enabling the search engine to locate at least one image in the database that is related to the indicated text.

50. (Amended) A computer readable medium having computer-executable components, comprising:

(a) a component for automatically creating a query directly from indicated text, the query having a data structure that is recognizable by a search engine for a database;

(b) a component for providing the query to the search engine, the search engine searching the database for an image that is related to the indicated text;

(c) a component for returning the result from the query of the database, the result indicating when at least one image is related to the indicated text;

(d) a component for enabling the display of at least one related image indicated by the result from the query, the display of the related image being selectable for insertion into the document; and

(e) a component for displaying the related image that is inserted into the document, so that the related image is associated with the indicated text in the document.
